## Instructions

^ COLLAPSE ^

- Reminder: Make sure you start in dev and it's up to date
  - 1 `git checkout dev`
  - 2 `git pull origin dev`
  - 3 `git checkout -b M3-Challenge-HW`
- 1 Create a copy of the template given here: <https://gist.github.com/MattToegel/77e4b66e3c73c074ea215562ebce717c>
- 2 Implement the changes defined in the body of the code
  - 1 Hint: You may want to use your browser's developer tools to see the script that's pulled in, this may help with a few challenges
- 3 Do not edit anything where the comments tell you not to edit, you will lose points for not following directions
- 4 Make changes where the comments tell you (via TODO's or just above the lines that tell you not to edit below)
  - 1 Hint: Just change things in the designated `<style>` and `<script>` tags
  - 2 Important: The function that drives one of the challenges is `updateCurrentPage(str)` which takes 1 parameter, a string of the word to display as the current page. This function is not included in the code of the page, along with a few other things, are linked via an external js file. Make sure you do not delete this line.
- 5 Create a branch called M3-Challenge-HW if you haven't yet
- 6 Add this template to that branch (`git add/git commit`)
- 7 Make a pull request for this branch once you push it
- 8 You may manually deploy the HW branch to dev to get the evidence for the below prompts
- 9 Once done, generate the output/submission file
- 10 Add, commit, and push the submission file
- 11 Close the pull request by merging it to dev (double-check all looks good on dev)
- 12 Manually create a new pull request from dev to prod (i.e., base: prod <- compare: dev)
- 13 Complete the merge to deploy to production
- 14 Upload the same submission file to Canvas
- 15 Checkout dev and pull latest changes to prepare for future work

Branch name: M3-Challenge-HW

## Screenshots (4 pts.)

## Task #1 - Points: 1

Text: 5 Screenshots based on checklist items

## Checklist

\*The checkboxes are for your own tracking

#	Points	Details
#1	1	A screenshot showing the Primary page with the checklist items completed (the view that initially loads)
#2	1	A screenshot showing the page after the login link is clicked with URL shown
#3	1	A screenshot showing the page after the register link is clicked with URL shown
#4	1	A screenshot showing the page after the profile link is clicked with URL shown
#5	1	A screenshot showing the page after the logout link is clicked with URL shown
#6	1	Screenshots should be from heroku dev

## Task Screenshots:

Shows nav highlight with mouseover

#### Explanations (4 pts.)

^ COLLAPSE ^

##### Task #1 - Points: 1

Text: Briefly explain how you made the navigation horizontal

###### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

###### Response:

Used list style type to remove all bullet points or trailers, background color in order to get lightgreen background, I gave it zero padding in order to make sure the navigation bar starts from the beginning, and set the display to flex in order to display the items horizontally.

##### Task #2 - Points: 1

Text: Briefly explain how you remove the navigation list item markers

###### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

###### Response:

In between the `<style>...</style>` tags I added a CSS block looking ul elements inside of nav and just set the list style type to none.

##### Task #3 - Points: 1

Text: Briefly explain how you gave the navigation a background

###### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

Response:

Simply added a backgroundcolor inside of the block in which i created a horizontal navigation bar.

^ COLLAPSE ^

#### Task #4 - Points: 1

Text: Briefly explain how you made the links (or their surrounding area) change color on mouseover/hover

#### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

Response:

I created a CSS block which looks for items in nav with the tag `<a>` and setting the color inside the block to red. The `:hover` to select the item and set the color to red

^ COLLAPSE ^

#### Task #5 - Points: 1

Text: Briefly explain how you changed the challenge list bullet points to checkmarks (✓)

#### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

Response:

Created a CSS block using the selector `::before` in order to add the check mark as content before each element with the tag `<a>`

^ COLLAPSE ^

#### Task #6 - Points: 1

Text: Briefly explain how you made the first character of the h1 tags and anchor tags uppercased

#### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

explanation)

Response:

This block targets all elements with the `<h1>` tag and `<a>` tag and used a `transform-text: capitalize` in order to capitalize the first letter of each word.

^ COLLAPSE ^

#### Task #7 - Points: 1

Text: Briefly explain/describe your custom styling of your choice

##### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

Response:

I just changed the background color to light blue using a body block and then setting the background color inside that block.

^ COLLAPSE ^

#### Task #8 - Points: 1

Text: Briefly explain how the styling for the challenge list doesn't impact the navigation list

##### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

Response:

I created the block to target all elements with the tags `<li>`, however, in order to make it affect only the items in list i changed the block in order to target elements with the tag `<a>`

^ COLLAPSE ^

#### Task #9 - Points: 1

Text: Briefly explain how you updated the content of the h1 tag with the link text

##### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

Response:

I created a function called updatecontent which would select the elements with the tag <h1>. Then it would update the title and the header, however, it was not until I added an onclick in the eventlistener to check which button was pressed to then update the targeted content based off the click that I was able to get the webpage working properly.

^ COLLAPSE ^

#### Task #10 - Points: 1

Text: Briefly explain how you updated the content of the title tag with the link text

#### Details:

Explanation clearly describes solution and why it works (explain the code, don't use the code as an explanation)

Response:

I created a function called updatecontent which would select the elements with the tag <h1>. Then it would update the title and the header, however, it was not until I added an onclick in the eventlistener to check which button was pressed to then update the targeted content based off the click that I was able to get the webpage working properly.

Misc (2 pts.)

^ COLLAPSE ^

^ COLLAPSE ^

#### Task #1 - Points: 1

Text: Comment briefly talking about what you learned and/or any difficulties you encountered and how you resolved them (or attempted to)

#### Details:

At least a few sentences

Response:

This homework was not too difficult. Only the last two were because I did not realize we had to do payload processing in order to ensure the title and header were updated. I just made a function then figured it would set the value when calling the updatecurrentpage function.

^ COLLAPSE ^

#### Task #2 - Points: 1

Text: Add a link to your pull request (hw branch to dev only)

URL #1

Missing URL

^ COLLAPSE ^

Task #3 - Points: 1

Text: Add a link to your production file

URL #1

<https://it202-dsp82-prod-60d54bc3dccb.herokuapp.com/Challenge.html>

^ COLLAPSE ^

Task #4 - Points: 1

Text: Waka Time (or related) Screenshot

### Checklist

\*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Screenshot clearly shows what files/project were being worked on (the duration of time doesn't correlated with the grade for this item)

Task Screenshots:
